## INTRODUCTION

The FY 1997 HRSA Publications Catalog inventories all available HRSA-funded or sponsored publications. An addendum will be published every six months highlighting publications added or deleted from inventories.

Authors include HRSA staff, grantees, contractors and other associates. Some publications are targeted at multi-cultural audiences, available in Spanish, Creole, Chinese, Korean, Vietnamese, Samoan, Laotian and Tagalog. The catalog provides easy ordering information and reflects one more way HRSA fulfills its primary health care and public health mission.

Over 500 publications are represented from our four bureaus and select offices within the Office of the Administrator (OA): (1) Bureau of Health Resources Development (BHRD); (2) Bureau of Health Professions (BHPr); (3) Bureau of Primary Health Care (BPHC); (4) Maternal and Child Health Bureau (MCHB); (5) Office of Communications; (6) Office of Planning, Evaluation and Legislation; and (7) Office of Rural Health Policy.

The document is organized in three major parts—Sections I, II, and III. Section I includes: Table of Contents; Introduction; Mission and Vision; Letter From the Acting Administrator; and Acronyms. Sections II and III list publications.

Section II materials may be ordered via clearinghouse, bureau, division or office. The publications are a diverse mix, organized by bureau or office: journal articles, administrative reports, brochures, facilities information, pamphlets, directories, manuals, posters, newsletters, monographs, statistical summaries, bibliographies, video recordings, proceedings/minutes, books, workbooks, charts/graphs/maps, guides, measurement tools, legislation, catalogs, fact sheets, and miscellaneous.

Section III materials may be ordered at a local public or university library or on-line services with Grateful Med on the Internet. Publications include the following: miscellaneous peer-reviewed articles, book chapters, invited papers, editorials, commentaries, etc.

# MISSION & VISION

---

HRSA will strive to achieve:

- Increased access to high-quality health care for populations which are disadvantaged and/or underserved.
- A catalytic role in promoting positive relationships among governmental and non-governmental organizations involved in meeting the health care needs of the Nation.
- An environment which is supportive of employee growth and professional development, which maximizes each employee's contribution to the Agency's mission.
- A synergistic working relationship between HRSA organizational units that fully utilizes the strength of their diverse legislative mandates.
- An environment which emphasizes flexibility in programmatic focus, to ensure that emerging underserved populations are promptly and accurately identified and that changes in the health care needs of populations served are appropriately addressed.

The Health Resources and Services Administration (HRSA) improves the health of the Nation by assuring quality health care to underserved, vulnerable and special-need populations and by promoting appropriate health professions workforce capacity and practice, particularly in primary care and public health.

resource barriers (e.g., in rural and inner-city areas) or economic barriers, such as lack of insurance. *Vulnerable* populations include those with unique circumstances, such as the homeless, migrants, and those with substance abuse problems, and includes mothers and children as a group. *Special-need* generally refers to individuals/populations with certain health conditions that require special types of care, and include children with special health care needs and their families, individuals with HIV/AIDS, and individuals whose illness can be treated through organ, tissue and bone marrow transplantation.

Throughout this catalog, the terms underserved, vulnerable, and special-need populations refer to individuals who, for one reason or another, often experience difficulty gaining access to quality health care. *Underserved* generally refers to those who have difficulty gaining access because of geographic or

# LETTER FROM THE ACTING ADMINISTRATOR

---

Dear Colleagues and Friends:

The Federal Health Resources and Services Administration (HRSA) supports a broad array of programs to make essential health care services and providers accessible to poor, uninsured, isolated and vulnerable Americans.

This first HRSA Publications Catalog documents just how diverse and interrelated HRSA's programs have become. It includes more than 500 books, chapters, articles and other information-sharing documents published by or for HRSA during fiscal year 1996. With this volume as your guide, you can access comprehensive and current information on, to name a few:

- Integrating a community health center into managed care networks for Medicaid beneficiaries;
- Reducing infant mortality by using community workers in public housing;
- Preventing transmission of HIV from a pregnant woman to her fetus; and
- Training resident physicians and other professionals at community-based sites.

With decades of experience caring for people who live where primary care is in dangerously short supply, fortifying the maternal and child health system, facilitating longer and better lives for people with HIV/AIDS and other special health conditions, and fostering a more diverse, more equitably placed primary care workforce, HRSA offers knowledge and information on virtually every aspect of providing necessary health care to the underserved. Many of the lessons to be learned are equally applicable to other Americans.

I hope you find this catalog useful and encourage you to use it often. You may also visit HRSA at our website, **<http://www.hrsa.dhhs.gov>**.

Thank you for your interest in HRSA and our work to provide primary care services and health care professionals for the underserved. If you have comments or questions, please phone the HRSA Office of Communications at 301-443-3376.

Sincerely,

Claude Earl Fox, M.D., M.P.H.

# ACRONYMS

---

AIDS	Acquired Immune Deficiency Syndrome
BHCDA	Bureau of Health Care Delivery & Assistance
BHP	Bureau of Health Professions
BHRD	Bureau of Health Resources Development
BPHC	Bureau of Primary Health Care
CHC	Community Health Center
CISS	Community Integrated Service Systems
C/MHC	Community and Migrant Health Center
COGME	Council on Graduate Medical Education
DFCR	Division of Facilities Compliance and Recovery
DHHS	Department of Health & Human Services (U.S.)
DHS	Division of HIV Services
DOT	Division of Transplantation
DVIC	Division of Vaccine Injury Compensation
FAQs	Frequently Asked Questions
FY	Fiscal Year (October 1 to September 30)

## **PUBLICATION LISTING AND ORDERING INFORMATION (HRSA CLEARINGHOUSES OR BUREAUS)**

Because of the diversity of HRSA's four bureaus, there are specific ordering sources for each one. Each bureau and office (1) developed a list by topic only or topic and inventory code with ordering instructions based on their dissemination procedures; and (2) identified a contact(s) at the beginning of their list. MCHB used inventory codes within a separate section on Sudden Infant Death Syndrome. Order forms are available at the beginning of each bureau/office listing and on the back of catalog.

The catalog contains over 500 listings. The health-related topics include HIV/AIDS, organ transplantation, perinatal, minority health, health professions, vulnerable populations, nutrition, specific diseases, and more.

Types of available publications include the following: brochures, facilities information, pamphlets, directories, manuals, posters, newsletters, monographs, statistical summaries, bibliographies, videos, proceedings/minutes, books, workbooks, charts/graphs/maps, guides, measurement tools, legislation, catalogs, fact sheets, and miscellaneous.

If you have questions about the publications, contact the person or organization identified at the beginning of each respective section.
